

# **JAI HIND COLLEGE AUTONOMOUS**

## **Syllabus for FYBSc / BA**

**Course : Mathematics**

**Semester : II**

*Credit Based Semester & Grading System*

*With effect from Academic Year 2018-19*

# List of Courses

**Course: Mathematics**

**Semester: II**

<b>SR. NO.</b>	<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>NO. OF LECTURES / WEEK</b>	<b>NO. OF CREDITS</b>
<b>FYBSC / BA</b>				
1	SMAT 201/ AMAT 201	Calculus II	3	2
2	SMAT 202	Algebra II	3	2
3	SMAT2 PR2 /AMAT2 PR2	Practical-II (Based on SMAT 201/AMAT 201, SMAT 202)	3	2

<b>Course Code</b> <b>SMAT 201</b> <b>AMAT 201</b>	<b>Course Title : Calculus II</b> <b>(No. of credits 2 No. of Lecture / week 3)</b>	
<p>Course Description: The aim of this course is to expose students to the beauty of limits, continuity and the concept of differentiation. The first unit is based on limits and continuity in which students learn the definition of continuity and sequential continuity and the equivalence between them. Problems based on these concepts are solved rigorously. The next unit is based on differentiability. Here students understand the notion of differentiation of a real valued function and mean value theorems. In the last section the emphasis is on applications of differentiability.</p>		
<b>Unit I</b>	<b>Limits and continuity</b>	<b>15 L</b>
	<p>(1) <math>-\delta</math> definition of limit of a (real valued) function, Right hand and Left hand limits, Uniqueness of limit when it exists, Algebra of limit of a function, Sandwich theorem. (2) <math>-\delta</math> definition of continuity of a (real valued) function, examples, Sequential continuity.</p> <p>(3) Algebra of continuous functions, Continuity of <math> f </math> when <math>f</math> is continuous. Continuity of composition of two continuous functions.</p> <p>(4) Examples of discontinuous functions and continuity of constant function, identity function, trigonometric functions, polynomial functions etc.</p> <p>(5) Intermediate value theorem and its applications, A continuous function on a closed and bounded interval is bounded and attains its bounds and its consequences.</p>	
<b>Unit II</b>	<b>Differentiability</b>	<b>15 L</b>
	<p>(1) Differentiation of a real-valued function, examples of differentiable and non-differentiable functions, differentiability implies continuity, Algebra of differentiable functions, Derivative of an inverse function.</p> <p>(2) Chain-Rule, Higher order derivatives, Leibnitz rule, L'Hospital's rule, examples of indeterminate form.</p> <p>(3) Rolle's theorem, Lagrange's and Cauchy's mean value theorem, their applications and examples.</p>	
<b>Unit III</b>	<b>Applications of Differentiation</b>	<b>15 L</b>
	<p>(1) Taylor's theorem and its applications.</p> <p>(2) Definition of local maximum and local minimum, necessary condition, stationary points, first and second derivative test, examples, Graphing of functions using first and second derivatives.</p> <p>(3) Application to economics and commerce, Concave, convex functions, points of inflections.</p>	

## Practicals for Calculus-II

- (1) Problems on limits and continuity using definition
- (2) Problems on sandwich theorem and intermediate value theorem.
- (3) Problems on differentiability and Leibnitz rule, L'Hospital's rule
- (4) Problems based on mean value theorems.
- (5) Problems on local maxima and minima.
- (6) Concavity of curves with graphs.

<b>Course Code</b> SMAT 202	<b>Course Title : Algebra II</b> (No. of credits 2 No. of Lecture / week 3)	
<p><b>Course Description:</b> The aim of this course is to introduce System of linear equations and matrices and to understand polynomials over R and permutations of a set. The first unit is devoted to system of linear equations. We then proceed to introduce permutations, symmetries, cycles and give its applicaions. In the last unit we introduce polynomials over set of reals and complex numbers. We also introduce gcd of two polynomials over R, Euclidean algorithm and solve problems based on that. Different techniques using rational root theorem will enable students to find roots of a polynomialempphasis is on applications of differentiability.</p>		
<b>Unit I</b>	<b>System of linear equations and matrices</b>	<b>15 L</b>
	<p>(1) System of homogeneous and non-homogeneous linear equations, the solution of system of m homogeneous linear equations in n unknowns by elimination and its geometrical interpretation.</p> <p>(2) Definition of an n-tuple of real numbers, sum of two n-tuples and scalar multiplication of an n-tuple.</p> <p>(3) Matrices with real entries; addition, scalar multiplication and multiplication of matrices; transpose of a matrix, types of matrices: zero matrix, identity matrix, diagonal matrices, triangular matrices, symmetric matrices, skew-symmetric matrices, invertible matrices, identities such as <math>(AB)^t = B^t A^t</math>, <math>(AB)^{-1} = B^{-1} A^{-1}</math></p> <p>(4) System of linear equations in matrix form, elementary row operations, row echelon form, Gauss elimination method, the system of m homogeneous linear equations in n unknowns has a non-trivial solution if <math>m &lt; n</math>.</p>	
<b>Unit II</b>	<b>Permutations</b>	<b>15 L</b>
	<p>1) Definition of a permutation of a set, Set of all permutations of the set <math>\{1, 2, \dots, n\}</math> i.e. <math>S_n</math> and its cardinality, Symmetries of an equilateral triangle, square, rectangle.</p> <p>(2) Cycles, Composition of permutations, properties of permutations such as every permutation of a finite set can be written as a cycle or a product of disjoint cycles, disjoint cycles commute.</p> <p>(3) Transpositions, Any permutation can be expressed as a product of transpositions, order of a permutation, sign of a permutation.</p>	
<b>Unit III</b>	<b>Polynomials</b>	<b>15 L</b>
	<p>(1) Definition of a polynomial, polynomials over the field F where <math>F = \mathbb{Q}, \mathbb{R}</math> or <math>\mathbb{C}</math>, Algebra of polynomials, degree of a polynomial, basic properties.</p> <p>(2) Division algorithm for polynomials over R, gcd of two polynomials and its basic properties, Euclidean algorithm and its applications, roots of a polynomial, relation between roots and coefficients, multiplicity of a root, remainder theorem, factor theorem.</p>	

- |  |   |  |
|--|---|--|
|  | <p>(3) A polynomial of degree <math>n</math> has at most <math>n</math> roots, Complex roots of a polynomial in <math>\mathbb{R}[X]</math> occur in conjugate pairs, statement of Fundamental theorem of algebra, a polynomial of degree <math>n</math>.</p> <p>(4) Rational root theorem and its consequences such as <math>\sqrt[p]{p}</math> is an irrational number when<br/><math>p</math> is a prime number, roots of unity, sum of all the root of unity</p> |  |
|--|---|--|

<b>Course Code</b> <b>SMAT 2 PR2</b> <b>AMAT2 PR2</b>	<b>Course Title : Practical II</b> <b>(No. of credits 2 No. of Lecture / week 3</b>
	<p>Practicals for Algebra-II</p> <p>(1) Problems of solving homogeneous system of <math>m</math> equations and <math>n</math> unknowns by elimination, problems on row echelon form</p> <p>(2) Solving a system <math>Ax = b</math> by Gauss elimination, finding inverse of a matrix if it exists, solutions of system of linear equations.</p> <p>(3) permutations of a finite set, Symmetries, cycles, compositions of permutations. (4) Permutation as a product of 2-cycles, order and sign of a permutation.</p> <p>(5) Problems on division algorithm and gcd of two polynomials.</p> <p>(6) Problems based on factor theorem, remainder theorem and rational root theorem</p>

## Exam pattern

- (1) Semester End Exam (60 marks). (2) CAI : 20 marks (Test).  
(3) CAII : 20 marks Assignment containing 5 problems. (4) Practical exam 50(10 + 18 + 6 + 6) marks.

### Paper Pattern

- (1) CA I : Problem solving test of 20 marks.  
(2) CA II(Assignment): This is given to a group of students. The Pattern is:  
(i) 5 Question based on Theorems  
OR  
(ii) 5 question based on Problems.

### Semester End Exam Pattern

#### Based on Unit I

- (Q.1/A) Attempt any 1 out of 2. 8 Marks each.  
(Q.1/B) Attempt any 2 out of 3. 4 Marks each.

#### Based on Unit II

- (Q.2/A) Attempt any 1 out of 2. 8 Marks each.  
(Q.2/B) Attempt any 2 out of 3. 4 Marks each

#### Based on Unit III

- (Q.3/A) Attempt any 1 out of 2. 8 Marks each.  
(Q.3/B) Attempt any 2 out of 3. 4 Marks each

#### Based on Full Syllabus

- (Q.4) Attempt any 2 out of 3. 6 Marks each.

## Practical Exam Pattern

- (Q.1) 10 Marks will be for question based on definitions, statements, multiple choice, True False, etc.
- (Q.2) 6 Marks For Journal and 6 Marks for Viva.
- (Q.3) 18 Marks Descriptive type where students have to solve 3 questions of 6 marks each out of 4 given choices.
